

Transition pieces , 2 and 3 mm .

Diameter D for 2 mm: $\phi 120 - \phi 1000$ mm.

Diameter D for 3 mm: $\phi 150 - \phi 1000$ mm.

Transition pieces are made of 2 and 3 mm sheet metal (s).

Transition pieces with $D \leq 350$ mm are supplied as standard for assembly with pull rings [f.b]. Transition pieces with $D \geq 400$ mm are supplied with flanges [m.fl].

State dimensions for $BU \times LU$ and D plus assembly method when ordering.

Can be made to order in other dimensions. Also available in asymmetric format.

Calculating H:

$$H = 240 + 0,5 \times (\text{max. value of } LU - D) \text{ or } (BU - D)$$

Example:

$$D = 350, LU = 400, BU = 600, EXL = 200, EXB = 300$$

$$H = 240 + (0,5 \times 250) = 240 + 125$$

$$H = 365 \text{ mm}$$
